The Center of Innovation (COI) Acceleration Support Program

Period of Implementation: FY 2022

Theme	Name	Contents
The Center of Innovation (COI) Acceleration Support Program	Research and Development concerning "Daily Health Screening System 2.0" in our daily life, which creates a "Distributed Health Production Society".	We are trying to contribute to building an ideal "Distributed Health Production Society", in which we are able to become healthy in our daily life, by developing "Daily Health Screening System 2.0" which is optimized for the with-corona/post-corona society, then expanding the system through multidimensional development. In order to achieve the goal, we are performing the following 3 researches in parallel. 1. Social and economic evaluation of the empirical studies of urinary sodium–potassium ratio monitoring for "Daily Health Screening System 2.0". 2. Establishment of a data platform to realize UaaS (University as a Service) for "Daily Health Screening System 2.0". 3. Study of the evidence of the behavior modification by utilizing "Daily Health Screening System 2.0"

● R&D themes

- ■ Social and economic evaluation of the empirical studies of urinary sodium–potassium ratio monitoring for "Daily Health Screening System 2.0".
- ■ Establishment of a data platform to realize UaaS (University as a Service) for "Daily Health Screening System 2.0".
- ■ Study of the evidence of the behavior modification by utilizing "Daily Health Screening System 2.0".
