Q1 What’s the status of the restoration and reconstruction at Tohoku University?

A1 We are conducting our education and research activities as usual.

We are not only recovering our education and research environments, but also taking the disaster as an opportunity to improve them more than ever.

Q2 How is Tohoku University supporting afflicted students and examinees?

A2 We are waiving entrance examination fees and tuition, and preparing dormitory housing.

Tohoku University is exempting affected examinees from entrance examination fees and tuition. In addition, we have constructed three emergency dormitories and will provide rooms to affected students, including foreign students, free of charge.
Q3 What are the radiation levels on the campuses?

A3 Approximately 0.07-0.08μSV.

The graph shows the level of radiation measured at Aobayama campus from March 18, 2011. Currently, it is fluctuating between 0.07-0.08μSV. For detailed data, please visit the Tohoku University Website.

http://www.bureau.tohoku.ac.jp/anzen/monitoring/

Information on the level of radiation in Miyagi prefecture is available at the Miyagi Prefectural Government Website.

Q4 How is Tohoku University contributing to afflicted areas?

A4 Students and staff members are contributing in various ways.

Support for volunteerism

Students and staff members at Tohoku University are contributing in various ways ever since the disaster. In addition, the "Tohoku University Great East Japan Earthquake Student Volunteer Support Center" was created to support volunteer activities by students.

Establishment of Institute for Disaster Reconstruction and Regeneration Research

Tohoku University founded the Tohoku University Restoration and Rebirth Research Organization in order to conduct strategic and systematic research activities, education, and outreach activities that will lead to recovery from the disaster and rebirth of the local community. As a central university in the afflicted area, we will report our research results and put them into practice.
